

ROSARITO CITY HALL LED UPGRADE, BAJA CALIFORNIA, MEX

For the city of Playas de Rosarito, we carried out an important project to reconstruct and optimise the street lighting in front of the City Hall, which had an extremely positive impact on the living conditions and overall sustainability of the city. Our work focused on upgrading the lighting of the Town Hall and the car park, and the results exceeded expectations.

Thanks to new, efficient and energy-saving light sources, we have achieved a significant improvement in public lighting. The new light installations have also added a stunning atmosphere to the area around the Town Hall and car park and highlighted architectural features, contributing to the overall aesthetic enhancement of the public realm.

An example of successful cooperation for upgrading infrastructure in the city.

Innovative technologies have brought about positive changes for the local community.

New lighting has improved living conditions and safety in the city.
