

65%

FRONTIER FIRE, SALTILLO, MEX

For company Frontier Fire we have implemented a complete replacement of warehouse lighting during continuous operation and without interruption. New modern LED luminaires were installed in the production hall. Each lighting fixture is individually switched by a combined Daylight and motion sensor to maximize energy savings. The luminaires were installed by reusing of existing electrical installation system, which was adapted according to the new

warehouse layout. Also warehouse operator's workplaces were individually illuminated. Thanks to the combination of new modern LED energy saving luminaires switched by combined Daylight and motion sensor, the customer has achieved energy savings up to 83%.
